## for the Understanding NEAR Science: Building Self-Healing Communities Presentation

*NEAR Science stands for neurobiology, epigenetics, Adverse Childhood Experiences (ACEs) and resilience research.*

**Date: Thurs., June 26**

**Location: Becker  
County Museum**

**Time: Choose from  
2-4pm or 7-9pm**

You are invited to attend an Understanding NEAR Science: Building Self-Healing Communities presentation to learn how childhood adversity impacts our lives, the lives of our children, and the health of our communities. These presentations represent a paradigm shift in human understanding of individual and societal health and well-being. These presentations highlight key findings from the fields of neurobiology, epigenetics, epidemiology, and resilience research, demonstrating the impacts of Adverse Childhood Experiences (ACEs) on health and well-being and offering strategies to build resilience.

The goal of these presentations is to build a common language and understanding about NEAR Science as a starting point. All are welcome, and we encourage diverse cultural and identity groups to attend this presentation. Each of us holds wisdom to create healthier communities, and attendees are encouraged to think about how this information can be applied within their own family, work life, and community.

*Presented by FamilyWise on behalf of Becker County Children's Initiative in collaboration with the Becker County Museum. Please plan to attend ONE of the time choices above/no reservations required. All those in attendance have a chance to win one \$50 gift card for each time slot.*
